

Declaration of conformity according to Reg. (E U) 1935/2004

for articles coming into contact with foods.

This is to declare that the following product: testo 103 (Penetration thermometer)

conform to the regulation of the Directive (E U) 1935/2004 of the European Parliament and the requirements of the L FG B (German Food and Feed Code) §30, §31 in the current version.

Good manufacturing practice for the materials and items we use that are intended to come into contact with food complies with Regulation (E U) No. 2023/2006 (G MP) of December 22, 2006. Description:

Food contact materials are all articles which are intended to come directly or indirectly into contact with foodstuffs. In measuring instruments, these are only the parts whose intended purpose, specified by the manufacturer, is to have permanent contact with food. The requirements of the Regulation Reg. E U 1935/2004 thus refer to the articles which are permanently in contact with food. The food contact parts of the portable Testo temperature measuring instruments (see also above) are made of food-grade plastic and are fixed into the probe shaft up to within 1cm before the crossover to the plastic casing. The exact description of the penetration depth and the intended purposes for the food contact parts are in the manuals of the respective products. I N F O R M A T I O N F O R... Temperature probes:

All temperature probes from Testo consist of food-quality stainless steel (AISI 316L) or 316Ti. Probe handles, cables, connectors, housing, protective covers and materials which are permitted to come into contact with food for a short period, but are not designed for long-term contact with food. Other Testo measuring instruments:

Data loggers, infrared instruments as well as accessories such as protective covers, chargers and cables are not in the sense of the regulation, as these are not designed to come into direct contact with foodstuffs. Traceability:

Our products which can potentially come into contact with food are provided with a date of manufacture. This allows us to trace the production date back to the delivery by our I SO 9001 quality management system. This document was created electronically and is valid without a signature.
